Solar Power

- One of the largest rooftop photovoltaic arrays in Connecticut – 4,540 solar panels, generating green energy for approximately 14% of our total electricity usage

Fuel Cell

- 700kW fuel cell onsite. This closed-loop system converts natural gas fuel and air into electricity through an electrochemical process without combustion at the highest efficiency of any power solution available in the world today. Combined with our solar array, we’re producing approximately 75% of our own electricity.
